Re: IB Docket No. 08-184 and IBFS File No. SAT-MOD-20111118-00239

Dear Ms. Dortch:

LightSquared Subsidiary LLC ("LightSquared")\(^1\) hereby submits this combined semi-
annual report pursuant to the Memorandum Opinion and Order and Declaratory Ruling
adopted by the Commission on March 26, 2010 in IB Docket No. 08-184 (the "MO&O"),
and quarterly report pursuant to the Order and Authorization adopted by the
Commission on January 26, 2011 in IBFS File No. SAT-MOD-20111118-00239 (the
"O&A") (collectively, the "Orders"). By separate letter, LightSquared requests
confidential treatment of this report.

On February 15, 2012, the Commission released a Public Notice seeking comment on
the letter sent to it on February 14, 2012 by the National Telecommunications and
Information Administration’s (NTIA).\(^2\) The Public Notice addressed certain issues
related to the potential incompatibility of GPS receivers with LightSquared’s planned
operations, and recommended vacating the Commission’s Conditional Waiver Order
and modifying LightSquared’s satellite license to suspend indefinitely its ATC authority.
The Conditional Waiver Order itself provides that LightSquared and members of the
GPS industry must resolve certain outstanding issues “before LightSquared
commences offering commercial service pursuant to [the waiver granted in the
Conditional Waiver Order] on its L-band MSS frequencies.”\(^3\) In light of the
Commission’s Public Notice and the unresolved condition in the Conditional Waiver
Order, LightSquared is not yet providing commercial service using its ATC authority.

---

\(^1\) See Letter from Jeffrey J. Carlisle, Executive Vice President, LightSquared GP Inc., to Marlene H.
Dortch, Secretary, FCC (July 20, 2010) (notifying the Commission of the corporate name changes
affecting various SkyTerra-named entities).

\(^2\) See Public Notice: International Bureau Invites Comment on NTIA Letter Regarding LightSquared

LightSquared remains committed to working cooperatively with Congress, federal government agencies, and the GPS industry to address the concerns raised by the GPS industry and others.

Beginning in September of 2012, LightSquared made a series of filings with the Commission proposing solutions that would allow the company to deploy terrestrial broadband service in a way that is compatible with legacy GPS receivers. These filings have been accepted by the Commission and all have been placed on public notice for comment. The comment cycles with respect to the underlying public notices were all closed as of January 11, 2013.

SITE DEVELOPMENT

As a result of the Commission’s Public Notice of February 15, 2012, LightSquared has not undertaken any significant site development activity during the reporting period. LightSquared has focused its efforts on resolving the underlying spectrum and deployment issues identified by the Commission through the series of filings referenced above.

DEVICE MANUFACTURERS

Qualcomm Incorporated is integrating L-Band LTE technology in its mainstream chipset roadmap and has developed an advanced satellite air interface technology to enable the satellite mode of operation in mobile devices.

SATELLITE

Each of the satellites operated by LightSquared has performed nominally and as expected over the past six months.

---

PARTICULAR REPORTING REQUIREMENTS

1. Pursuant to reporting requirement III.A of the O&A, LightSquared reports that as of March 31, 2013, there were approximately [ ] terminals and approximately [ ] active private network customers on its MSS-only network. LightSquared is capable of providing only an estimate of the latter figure because LightSquared does not have direct access to the subscriber counts of its wholesale customers. As noted above, LightSquared is not yet providing commercial MSS/ATC or terrestrial-only services. Accordingly, the number of reportable active terminals and active users on its network in these categories is zero. As the terrestrial network is not yet in commercial service, the number of reportable total bytes carried by LightSquared's terrestrial network also is zero (see Condition 3 to the MO&O).

2. Pursuant to reporting requirement III.B of the O&A, LightSquared provides the following list of components available from mainstream component suppliers to support L-band dual mode operations:

   RF Components:
   •
   •
   •
   •

   Sincerely,

   [Signature]

   Jeffrey J. Carlisle
   Executive Vice President
   Regulatory Affairs and Public Policy
